Subfields

\$a Type of Carrier Code

A coded value specifying the type of carrier applying to the resource, according to the provisions of the system specified in subfield \$2. Repeatable when several types of carrier, associated with the same media type, are present in the resource.

\$2 System code

Source of the code used in \$a. Not repeatable.

\$6 Interfield Linking Data

Data required to link the field with other fields in the record (for example, to link to field 182 – Coded data Field – Media Type). Repeatable.

\$8 Materials specified

Part of the described materials to which the field applies. Repeatable.

Notes on Field Contents

If a textual form of the type of carrier designation is desired use field 283, preferably in addition to field 183. In that case, indicator 2 should be set to 0 in field 183.

UNIMARC bibliographic 1XX fields provide most of the type of carrier designation coded information but, alternatively, the list of code values used in MARC21 for RDA carrier types could be used. (See <http://www.loc.gov/standards/valuelist/rdacarrier.html>). For RDA carrier types use “rdacarrier” in \$2.
